Examiner #

QUALIFYING SUBGINGIVAL CALCULUS REMOVAL ASSIGNMENT:

You have been assigned to treat a full quadrant to demonstrate your calculus removal skills. Contained within that quadrant are 12 selected surfaces which have been identified and assigned to you. The point value for the removal of calculus from the 12 selected surfaces is 5.5 pts each.

Below are listed 10 of the 12 selected surfaces that you have been assigned. You do not know the location of the other 2 assigned selected surfaces. You will be evaluated on the removal of all calculus within the quadrant with the 12 selected surfaces weighted more heavily than other unselected surfaces within the quadrant.

& Calc.
Location

Subgingival Calculus Detection Findings: COMPLETE BEFORE STARTING TREATMENT

For the teeth assigned, indicate if subgingival calculus is present by placing an "X" in the box marked - "Yes" - present or - "No" - not present for each of the four surfaces on each tooth: Mesial, Distal, Facial, And Lingual

Tooth #	M	D	F	L
<input type="checkbox"/>	Yes No	Yes No	Yes No	Yes No
<input type="checkbox"/>	Yes No	Yes No	Yes No	Yes No
<input type="checkbox"/>	Yes No	Yes No	Yes No	Yes No
<input type="checkbox"/>	Yes No	Yes No	Yes No	Yes No

Probing Measurement Findings

COMPLETE AFTER FINISHING TREATMENT

- Two teeth (one anterior, one posterior) assigned for periodontal probing
- After you complete treatment, measure and record in the appropriate boxes the depth of each sulcus/pocket on the indicated surfaces to the nearest mm

Anterior

Posterior
